Imaging

Human comfort in a high-technology environment

The digital revolution is under way in radiology and diagnostic imaging departments. The adoption of technology—specifically picture archiving and communications systems (PACS)—calls for a reinvention of reading room design. The emphasis is on ergonomics and creating comfortable, healthful work environments for your radiologists.

A round-the-clock rotation of readers requires work areas that fit all body shapes and sizes. Extended periods of sitting and analyzing digital information takes its toll on the body—from eyestrain to back pain. Ergonomically considered work environments

and highly adjustable products will improve people’s comfort and productivity. They can also help influence the attraction and retention of a valued radiology staff.

Herman Miller for Healthcare is dedicated to creating humane designs that support people’s work and promote their well-being. Our goal is to make your people comfortable, safe, and productive. And since our ergonomic products can reduce pain and injury, they can also reduce an organization’s costs.

Work sensibly

120-degree work surfaces form a cockpit that places the radiologist in control and comfortably supports viewing multiple monitors or consulting with a coworker. Nonreflective surfaces are offered with a number of adjustment, size, and edge options.

Work flexibly

Functionality and operational efficiency are supported by our modular products, which can be reconfigured as work styles, staff levels, or equipment requires. Collaborative and individual work areas can be created with a single product line or mix of aesthetically compatible products.

Sit comfortably

Herman Miller is the leader in ergonomic seating, and the products we offer reflect our knowledge of seating science and design. Our work chairs include adjustments that give readers the means for easily fitting their chair to their body size, surface height, or personal preference.

Adjust with ease

Our products are designed with personal control in mind. To help ease visual fatigue and eyestrain, readers can position rolling screens to diffuse light and reduce reflection. Adjustable monitor arms and surfaces let readers easily change viewing angles and work surface height.

Organize efficiently

Technicians need the right supplies and equipment organized and at hand in imaging rooms. A broad offering of modular and secure storage and transport carts enhances the efficiency of your staff. Other imaging room furnishings include our modular casework, stools, and guest chairs.

Our versatile, flexible products give people real choices. If they need something extra, we can do that, too, from modifying existing products to developing new ones. For more information on our Easy OptionsSM capability, please visit www.HermanMiller.com/easyoptions.
