

Environmental Product Summary, EMEA

Kivo

Design Story

Now, more than ever, businesses champion collaboration and interactivity, requiring the office space to continually evolve. This need has seen a rise in open plan floor plates and a decrease in private office spaces, necessitating a balance to be struck between individual and group needs. Kivo is a space division tool, designed to provide a solution to this balance.

Kivo's simple design and light weight skeleton utilises five core components, which enables straight forward, speedy construction and reconfiguration. Kivo's high re-configurability performance extends the life of the product by allowing it to evolve with the work place, reducing obsolescence.

Herman Miller's Design Protocol

Our commitment to corporate sustainability naturally includes minimising the environmental impact of each of our products. Our Design for Environment team (DfE) applies environmentally sensitive design standards to both new and existing Herman Miller products.

The DfE Design Protocol goes beyond regulatory compliance to thoroughly evaluate new product designs in four key areas:

- Material Chemistry and Safety of Input – What chemicals are in the materials we specify, and are they the safest available?
- Disassembly–Can we take products apart at the end of their useful life, to recycle their materials?
- Recyclability–Do the materials contain recycled content, and more importantly, can the materials be recycled at the end of the product's useful life?
- LCA–Have we optimised the product based on the entire life cycle?

Material Content

Kivo components are constructed from polished stainless steel, polyester, wool, plastic and other materials. Kivo is 99 percent recyclable based on the availability of recycling facilities.

Kivo comprises approximately 31 percent recycled materials

- 18% pre consumer
- 13% post-consumer

Textiles used in Herman Miller products can be made from natural or synthetic fibres. Several textiles are available with 100 percent recycled content. Plastic components $\geq 50g$ are marked with recycling codes where physically possible.

Herman Miller's UK manufacturing site is certified to ISO14001 (environment), ISO 9001 (quality) and OSHAS 18001 (health and safety). This product can help you to achieve criteria towards LEED, BREEAM, Ska and WELL building certifications.

Supplier Excellence

At Herman Miller, we are committed to working closely with our suppliers to reduce our collective impact on the environment.

We operate a successful closed-loop packaging scheme with key component suppliers. Wherever possible we segregate reusable packaging and pass it back to the supplier, who in turn reuses the packaging for future deliveries to Herman Miller.
