Perfect monitor placement for every person, place, and posture

Flo Monitor Arms
Designed by Colebrook Bosson Saunders

If you can’t adjust the placement of your monitor to a viewing angle and distance that’s comfortable for your eyes, your body will compensate. Hunching over and craning your neck may bring your eyes closer to your screen, but doing so makes for an awkward and unhealthy working posture. It also negates many of the ergonomic benefits of sitting in a high-performance work chair.

Everyone’s eyes are different, but everyone’s solution for the ideal monitor placement can be the same. The Flo family of monitor arms is designed for smooth, intuitive adjustments that let you choose the height, viewing distance, and tilt angle of your monitor, helping you maintain a healthy posture.
As Dynamic and Intuitive as the Technology It Supports

Flo monitor arms are as simple to install as they are to use. All Flo models mount easily to a variety of worksurfaces, and a standard VESA mount fits most flat-panel monitors on the market. Flo arms also include integrated cord management to keep cables contained and workspaces tidy.

An optional USB clamp mount adds three convenient USB ports, including one designed for fast charging. The USB clamp mount is available on surface clamp-mounted Flo Modular Monitor Arms (holding up to two monitors) and Flo Single-Screen Monitor Arms.

The counterbalance adjustment lets you set the optimal tension to provide stable support and fluid motion for a wide range of monitor sizes.
Heavy-Duty Capacity

Flo Plus Single provides a heavy-duty solution for single monitors between 20 and 40 lbs. Flo Plus Dual can hold two monitors, weighing 8 to 17 lbs. each. Flo Plus can support two monitors on the same arm with a single point of adjustment.

Unsurpassed Range

Up and down, swivel and tilt, portrait or landscape. Flo offers a range of articulation to suit many needs.

No Tools, Just Touch

Flo’s patented geometric spring technology allows fluid, fingertip control of monitor placement with minimum effort and maximum precision—no locking or tightening required.
Easy on the Eyes

By keeping your technology aligned with your body, a highly adjustable monitor arm can reduce the risk of eyestrain, which affects 91 percent of computer users.
