

HermanMiller

Ambit Workspace Solutions™

With height-adjustable tables, there are several unsolved customer problems: feeling exposed and easily distracted in open office environments, lack of storage and vertical cable management, and a lack of cohesive solutions—from functionality to aesthetics—designed to be used with height-adjustable products. There's an opportunity to enhance the user experience and better support organizations' investments in Herman Miller height-adjustable tables.

Ambit Workspace Solutions

A comprehensive portfolio of components and accessories that enrich the existing height-adjustable table product lines and elevates the user experience.

Visual harmony

Cohesive in style and texture, every element of Ambit is designed to enhance existing Herman Miller height-adjustable table products. Screens, shrouds, and vertical cable management work together purposefully to create a holistic sit-to-stand solution with dimension and functionality.

Personalize and privatize

Screen and shroud attachments with multiple configurations create a more private workspace to remain focused and productive in, whether sitting or standing. Ambit components have a broad selection of material choices that allow you to make the space your own. Additionally, the portfolio utilizes work tools and accessories, creating homes for personal items.

Intelligent storage tailored for you

Ambit offers multiple storage options—suspended and freestanding pedestal—without sacrificing organization for flexibility. Suspended storage options create easy access to personal items with a fluid motion, while pedestal storage options nest into the shroud to create a cleaner workspace and more legroom. Slim in design, Ambit supports hybrid workstyles and spaces and is designed for small or transient personal items.
