Overbed Table

Mirage

Overbed Table

The Mirage Overbed Table was designed to provide space for both patients and caregivers. The main top adjusts vertically within a range of over 17 inches to fit a wide variety of patients and applications. A lower tray adds caregiver functionality and rounded inside edges make the tray easier to clean.

Designed by Nemschoff

Human-Centered Solutions

Patient Convenience and Organization

A large main tray provides ample space for eating or activities, and a separate compartment expands the patient's options for organization.

Caregiver Support

Table height is easily adjusted with a one-handed mechanism. The adjustable bottom tray is positioned toward the caregiver, keeping supplies within reach.

Flexible Accommodation

With over 17" (43cm) of vertical range adjustment, Mirage is comfortable for patient use in a chair or bed. The X-base conveniently accommodates chairs, while the U-base was designed for use with beds.
