Wishbone Dual Bar Monitor Arm

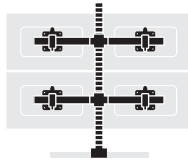

Designed for high-density applications, the Wishbone Dual Bar Monitor Arm has a space-saving design that makes it possible to install multiple screens in areas with shallow surfaces. Each bar supports two monitors weighing up to 26 pounds each and measuring up to 24" wide. Like the original Wishbone, it enables you to position your technology at the proper height to ease neck strain, using precise controls to place screens exactly where you need them and rotate them effortlessly between portrait and landscape orientation.
