

# Mbrace™ Wall-Mounted Technology

Perfectly suited for inpatient alcoves or bedside applications, Mbrace makes it easy for caregivers to share information and optimize needed space. It folds to within 9.5 inches from the wall and stores technology of up to 20 pounds. Mbrace has a height-adjustment range that accommodates seated or standing positions for most people and a counterbalance mechanism. Because the keying surface and monitor support are designed to move together, people can use just one hand to operate it. Mbrace can be installed in about 30 minutes.

## Benefits

- Easy to use, easy to install, easy to share information
- Ergonomically supports a wide range of users and different type of work activities
- Quality-built and -tested to last

## Warranty

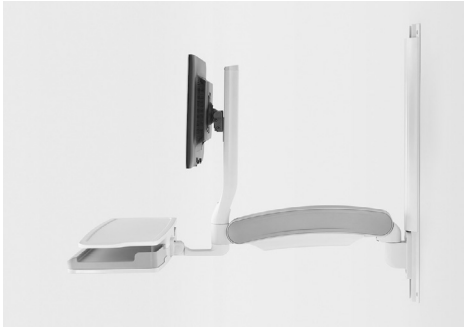

5-year

### Statement of Line

For the full statement of line, please refer to the [price book](#).

### Key Features

- 1. Range of Motion**  
Mbrace has a 22-inch height-adjustment range, which accommodates seated or standing positions for most people, regardless of their size. A counterbalance mechanism allows for knob-free repositioning, so anyone can adjust the support and use it comfortably. A 180-degree rotation makes for seamless information sharing.
- 2. Installation**  
Mbrace can be installed on Compass System tiles and other common surfaces in 30 minutes, minimizing downtime. This wall-mounted solution is also seismically tested and OSHPD-approved to withstand earthquakes up to 7.3 magnitude.
- 3. Unit Moves as One**  
Because the keying surface and monitor support move as one unit, you can work more quickly, even when you only have one hand free. Perfectly suited for inpatient alcoves or bedside applications, Mbrace features an extra-wide 27-inch work surface and pullout keyboard tray.
