Innovation Through Experience
Reshaping Learning Spaces for Makers, Hackers, and Coworkers

Key Insights

- Universal access to the Internet and breakthroughs in manufacturing have democratized innovation, creating a new driver for the economy.
- To thrive in this economy, people need opportunities to tinker (make), deconstruct (hack), and network (cowork).
- Academic institutions have an opportunity to prepare the next generation of innovators by designating learning spaces for making, hacking, and coworking.
- The most effective innovation spaces combine all three activities in one centrally located site that’s approachable to everyone.

How do people become innovators? In today’s economy, it’s often a hands-on approach. A growing community of makers, hackers, and coworkers are creating an emerging culture of “learning by doing” that is shifting how future workers learn to innovate.

As schools prepare the next generation to engage in this maker economy, they’re creating a new kind of learning space where students can engage in a combination of hands-on processes and networking to bring their ideas to life. To better understand this shift, Herman Miller researchers leveraged insights from prior Herman Miller research on the Future of Learning, toured university campuses, and interviewed education and business thought leaders.
We studied 13 maker, hacker, and coworking spaces across the United States.

While our focus was on education, the trends we noted extend into other organizations with an interest in innovation, including public libraries, museums, and corporate campuses.

**The Ingredients of Innovation**

Our preliminary explorations revealed that learners are seeking spaces that support a new user/learner experience. Makerspaces and hackerspaces were popping up on academic campuses, providing opportunities for empowered users to engage in a range of activities from tinkering to sharing ideas to designing, building, and developing prototypes for new products. Later in the exploration, it became evident that coworking activities share attributes with maker and hacker activities, so coworking spaces were added to the study.

Makers innovate through **tinkering**. The activity of making combines the Internet model of innovation with desktop manufacturing tools, resulting in much wider access to the tools needed to make things. This opens tinkering, designing, and prototyping to the novice creative and budding innovator. projects, and build new skills in a safe environment that supports failure.

With a computer, laser cutter, and 3D printer, anyone can learn to make a product in a relatively short period of time with minimal resources. The tools and activities available in makerspaces empower users to expand their creative horizons, try new projects, and build new skills in a safe environment that supports failure.

Hackers innovate through **deconstruction**. Hacking is a form of tinkering with a goal of understanding how something works. In today’s hackerspaces, individuals with similar interests can gather to work on projects; deconstruct and rebuild computers, electronics, and equipment; share knowledge; and collaborate on ideas, which leads to better inventions and innovations. Hackerspaces could be considered as pre-models of today’s coworking spaces.

Coworkers innovate through **networking**. Coworking spaces provide a shared working environment for people from different backgrounds and areas of expertise. The value of the coworking movement is in the community that is formed within shared working environments where learners and creatives work alongside each other, learn from each other, and build strong networks of knowledge and creativity.
The opportunity to innovate is in the hands of anyone who has an interest in making, hacking, and coworking. New opportunities are emerging for academic and corporate institutions to develop models for places of innovation where an interdisciplinary community of learners and innovators can engage in and lead in a new manufacturing economy and a sustainable culture of innovation. To do this, it is important to understand how elements of maker, hacker, and coworking spaces can come together to inform a true innovation space.

**The Invention Studio at GeorgiaTech**

**Characteristics**

- Makerspaces empower students to tinker, explore, and make anything they can imagine
- Hackerspaces invite deconstruction of computers/equipment and provide more sophisticated tools to explore the sciences, engineering, and arts
- A coworking-like space supports ideation, project development discussions, collaboration on homework assignments, and the occasional chess match

We noted these characteristics of the spaces we studied:

- Makerspaces in public libraries had similar tools in spaces designed to attract both novices and experts. Learning the new and different were key themes in all of the makerspaces.
- Stand-alone hackerspaces had a range of equipment types, but the general focus of the spaces was on enhancement of skills through learning by doing, collaborating, and exchange of ideas.
- The coworking spaces in the study both aimed to build a community of like-minded, yet diverse people who shared ideas and learned from one another.

**Why Should We Care About Innovation Spaces?**

Missed opportunities for disruptive innovation exist within many campus communities, whether the campus is higher education or corporate. Disruptive changes in technologies and global markets during the first decade of the 21st century are part of a social transformation that begins to reshape the way we think about the relationships between material production, technology, innovation, and society (Mancuso and Niessen 2014).

**SPARK at the University of Colorado, Boulder**

**POP Shop at Cornell University**

**Characteristics**

- Undergraduate-developed and managed coworking space
- Space is located adjacent to campus

**Challenges**

- Space has limited support for product development beyond rapid prototyping

**The SHED at the University of California, Berkeley**

**Characteristics**

- An undergraduate-developed and managed maker/hacker space serving as an inspiration for the new Jacobs Institute for Design Innovation

**Challenges**

- Incorporating spaces that support tinkering and coworking into the new building

---

_Herman Miller_
For those academic and corporate institutions that have little or no exposure to innovation spaces, harvesting great ideas within the institution is a place to start. Like all of the participants in the study, students, faculty, and employees have creative and constructive ideas about attributes of spaces that help them learn, create, and innovate. Studying how these ideas were developed and implemented on a small scale within a community will help leaders and planners understand how the activities might be planned, implemented, operationalized, and scaled to reach maximum potential.
